ALCAD

Reset SS-xxx / ST-xxx / SV-xxx to factory default parameters using IP-001 and HyperTerminal

STEP 1

Connect IP-001 to the streamer to be recovered with factorty default parameters (see figure 1)

Figure 1. Connection of IP-001

Important: only streamers to be recovered would be connected to 20 pin cable

STEP 2

Open HyperTerminal software Putty (http://www.putty.org/) and configure the Serial connection to access to IP-001

Save a "*Session*" with the following parameters:

- Name: Connection IP-001
- Type: Serial

Session/Serial parameters:

- COM: select the one that is assigned by Windows to USB driver
- Speed: 9600
- Data bits: 8
- Stop bits: 1
- Parity: Even
- Flow control: None

Load *"Connection IP-001"* and **Open** it

<u>STEP 3</u>

Wait until prompt appears (SS-201> or something like that) and type ***restore***

After a few minutes the streamer would be restored with factory default parameters
